Weekly Accomplishment Report

Date: September 21, 2026 to September 25, 2026

Week Number: 15

Title: Quizora Quest AN AI-INTERGRATED STUDY PLATFORM

WITH AUTOMATED REVIEWER GENERATION AND GAMIFIED LEARNING ACTIVITIES

Leader's Name: Pagdanganan, Angelica

Members' Names:

Andrade, John Cedric

Bravo, Venus

Reyes, John Bryan

Narrative Report:

From September 21 to 25, I assigned new tasks to the group focused on developing the Study Tools feature and creating the necessary database table for the AI Reviewer Generator. The assigned tasks were expected to be completed within the five-day period and prepared for presentation the following week. During this period, I completed the design of the Dashboard. For Venus, the assigned Study Tools design did not follow the intended functionality because the design combined elements of the Gamified feature with Study Tools. The Study Tools feature is specifically focused on the generation, management, and use of reviewers, so the gamified elements were not appropriate for this section. Angelica completed her assigned task by creating the database table responsible for storing and retrieving the data generated by the AI Reviewer Generator.

Meanwhile, Bryan raised concerns regarding the decision to work on the system during weekdays, stating that there were academic requirements during those days. He also expressed that the professor would understand if the group experienced delays. However, the assigned task was given a five-day period for completion and primarily involved creating the PHP code and the corresponding database table. Bryan later explained that he was busy from Monday to Wednesday and that his internet connection was unavailable on Thursday and Friday due to an issue with his internet service provider. He also mentioned that his device was experiencing slow performance when handling the required data. By the date of submission, Venus and Bryan had not submitted their assigned work. Venus explained that she was unable to send her work because of an emergency involving her dog. Bryan was also unable to submit his task due to the issues he had encountered with his schedule, internet connection, and device performance. As a result, only Angelica and I were able to complete our assigned tasks within the given period. The completed outputs were intended to be presented and demonstrated during the following week.
